

Benefits

- Validates readiness for an incident by testing in a simulated environment
- Identifies gaps in programs and procedures
- Ensures personnel understand their roles, responsibilities, and procedures
- Allows companies to practice their communication plan
- Instills confidence in management and team members

Insufficient skilled personnel dedicated to cybersecurity is the second biggest barrier to cyber resilience – with only 29% of companies surveyed having an ideal staffing level.

– 2015 Global Cybersecurity Status Report | ISACA International

Every day businesses face ever-changing security risks that could lead to a compromise of confidential and sensitive data. Business leaders know that guarding against an attack requires the development of an incident response plan.

Cylance® Consulting's Incident Response Table Top and War Game Exercise provides organizations the opportunity to **mimic a real-life incident** in order to ensure that the incident response plan has all the important elements in place as well as supporting documentation and procedures. The exercise allows organizations to not only **test their incident response capabilities**, but also gives the opportunity to **coordinate across various teams** in a nonthreatening, low-stress environment.

Service Overview

The exercise will start with discussions to identify the types of scenarios and key objectives for the project. A draft of a customized cyber incident report will also be reviewed. Once scheduling has been completed, a Cylance IR consultant will arrive on-site to provide a customized exercise for all participants.

Three options are available for conducting an exercise:

- **Crawl** — Introductory-level table top exercise that is primarily presentation-based with real-world scenarios to test the response and capabilities of all participants. Typically 1-3 days.
- **Walk** — For semi-mature response teams, hybrid exercises are a blend of presentation-based scenarios and hands-on problem solving. Typically 1-3 days.
- **Run** — Intended for mature security teams, advanced war game exercises are designed to closely simulate a real-world attack on critical systems or processes. Typically 3-5 days.

Deliverables

Cylance Consulting will provide multiple deliverables to assist in ensuring the incident response program is in place and any opportunities for improvement are well-defined, including:

- Engagement Schedule
- Documentation
- Collection of Cheat Sheets To Leverage During an Incident
- Cybersecurity Exercise Report
- Road Map for Program Enhancement
- Engagement Closure

Ensure your team is prepared for a real-world incident. Contact Cylance Consulting or your technology provider for details.
